

Radio Equations

$$\text{Voltage} = \text{Current} * \text{Resistance}$$

$$\text{Volts} = I \text{ "Amp"} * R \text{ "ohms"}$$

$$\text{Watts} = \frac{\text{Voltage}^2}{\text{Resistance}}$$

$$\text{Watts} = \text{Amps}^2 * \text{Resistance}$$

$$\text{XL ohms } \Omega = 2 * \Pi * \text{freq "Hz"}$$

$$\text{Xc ohms } \Omega = \frac{1}{2 * \Pi * \text{Freq "Hz"}}$$

$$\text{Impedance} = \sqrt{\frac{\text{XL}}{\text{Xc}}} \Omega$$

$$\text{Res Freq} = \frac{1}{2 * \Pi * \sqrt{\text{C} * \text{L}}} \text{ Hz}$$

$$Q = \text{Xc}/R = (\frac{1}{2}\Pi f C)/R = 1/(2 \Pi f C R)$$

$$Q = \text{XL}/R = (2 \Pi f L)/R$$

Radio Equations

$$\frac{1}{2} \lambda_{\text{ant}} = (300/\text{MHz}) * 0.95$$

$$\frac{1}{4} \lambda_{\text{ant}} = \frac{1}{2} \lambda_{\text{ant}} * \frac{1}{2}$$

$$Z_{\text{in}} = \frac{Z_{\text{cable}}^2}{Z_{\text{out}}} \text{ i.e. } \frac{75 * 75}{50} = 112 \Omega$$

$$\text{SWR} = \frac{V_{\text{max}}}{V_{\text{min}}} = \frac{V_{\text{max}} + V_{\text{rev}}}{V_{\text{min}} - V_{\text{rev}}}$$

$$\text{Return Loss} = 10 \log_{10} \frac{\text{Reflected power}}{\text{Incident Power}}$$

$$\text{Freq 3dB} = 1 / (2 * \Pi * R * C) \text{ Hz}$$

$$Z_{\text{in}} = Z_{\text{out}} * \left(\frac{\text{primary turns}}{\text{Secondary turns}} \right)^2$$

Radio Equations

Dynamic resistance $R_d = L / C R$

$$Q = 2 \pi f C * R_d$$

$$Q = (f_o / (f_2 - f_1))$$

$C_{total} = C_1 + C_2 + C_{\dots}$ parallel.

$$1/C_{total} = 1/C_1 + 1/C_2 + 1/C_{\dots}$$
 series

$$C_{total} = (C_1 * C_2) / (C_1 + C_2)_{\dots}$$
 series

$L_{total} = L_1 + L_2 + L_{\dots}$ series

$$1/L_{total} = 1/L_1 + 1/L_2 + 1/L_{\dots}$$
 parallel

$$L_{total} = (L_1 * L_2) / (L_1 + L_2)_{\dots}$$
 parallel

$R_{total} = R_1 + R_2 + R_{\dots}$ series

$$1/R_{total} = 1/R_1 + 1/R_2 + 1/R_{\dots}$$
 parallel

$$R_{total} = (R_1 * R_2) / (R_1 + R_2)_{\dots}$$
 parallel
